Precept 2 - Methods

AI/Preceptor: Alexander Ku

alexku@princeton.edu

He/him/his

Today's agenda

- Methods and Data Talk
- Kisilevsky (2003) Discussion
- Princeton Baby Lab Tour

How to conduct (developmental) science

1. Make an **observation** and turn it into a **question**
2. What is your **hypothesis**? Possible answer to your question
3. Design a **methodology** to test your hypothesis
4. **Collect** data
5. **Analyze** data

Types of (Developmental) Science

Deductive

Hypothesis first...data second!

Top down, confirmatory

Inductive

Data first ...hypothesis second!

Bottom up, exploratory

Deductive or
Inductive?

Netflix analyzes your daily watching patterns to recommend new movies

A school introduces anti-bullying posters in half its schools, counts bullying reports every quarter

A neuroscientist stimulates neurons in the amygdala of rats as they perform a learning task

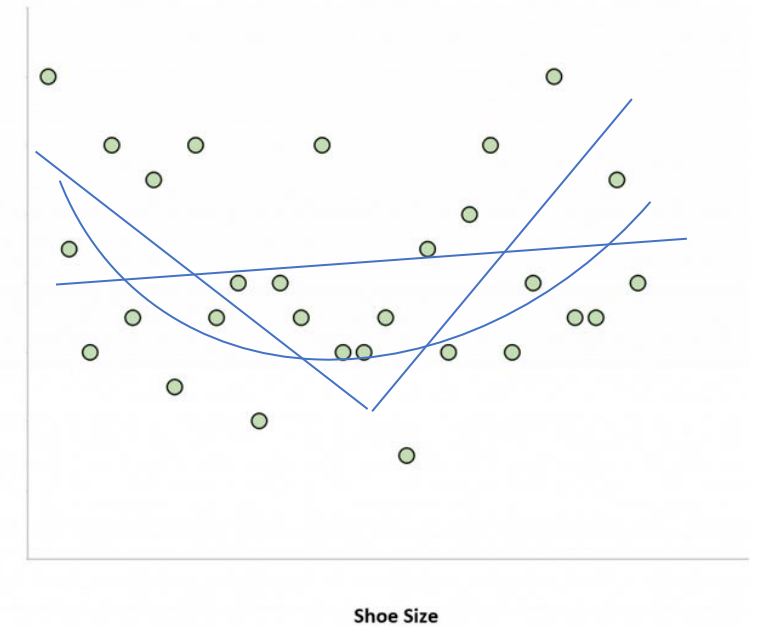

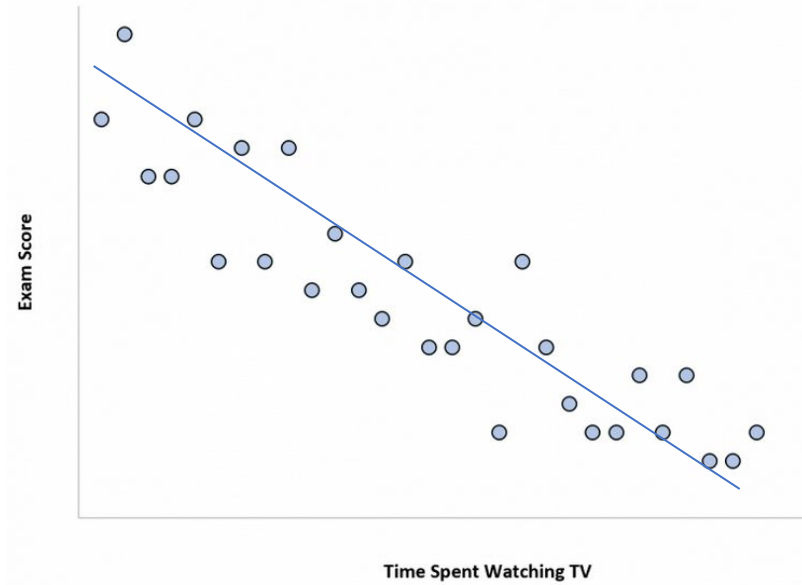

The World Bank correlates GDP with other indices to figure out why some countries are poor

Analysis the Data using Correlations

Fit of the Line ($r = ?$)

Direction Matters!

- Negative slope; as x increases, y decreases, $r < 0$
- Positive slope; as x increases, y increases, $r > 0$

BUT...

CORRELATION IS NOT CAUSATION:

- Correlation indicates correlation, not cause – effect relationship.
- Can there be a latent variable in play here?

Today's agenda

- ~~Methods and Data Talk~~
- Kisilevsky (2003) Discussion
- Princeton Baby Lab Tour

Kisilevsky (2003)

- Hypothesis:
- Participants:
- Independent variable:
- Dependent variable:
- Results:
- Problems?:

Kisilevsky (2003)

- Hypothesis: Fetuses recognize their own mother's voice
- Participants: 60 term fetuses
- Independent variable: person reading a passage (mother, female stranger)
- Dependent variable: fetal heart rate and body movement
- Results: ↑ heart rate for mother, ↓ heart rate for stranger
- Problems?

Are these results valid?

Internal Validity

- Are we certain A causes B?
- Increase control while decreasing confounds

External Validity

- Ecological validity; how representative is the experiment of the real world?

Good experiments have both!

! Help us improve your experience by [providing feedback](#) on this page.

UPFRONT

Are your findings 'WEIRD'?

May 2010, Vol 41, No. 5

Print version: page 11

The over-sampling of American college students may be skewing our understanding of human behavior, finds an analysis by researchers from the University of British Columbia. In a forthcoming issue of Brain and Behavioral Sciences, anthropologist Joe Henrich, PhD, and psychologists Steven Heine, PhD, and Ara Norenzayan, PhD, review the available database of comparative social and behavioral science studies. They found that people from Western, educated, industrialized, rich and democratic (WEIRD) societies — who represent as much as 80 percent of study participants, but only 12 percent of the world's population — are not only unrepresentative of humans as a species, but on many measures they're outliers.

“

—

Are these results valid?

- **Face Validity**

to test this idea

- **Convergent Validity**

same pattern

- **Divergent Validity**

same pattern

Which has higher convergent validity:
Taking the ACT and SAT or MCAT and

LSAT?

Which has higher divergent validity:
Taking the ACT and SAT or MCAT and
LSAT?

Did Kisilevsky measure convergent validity, divergent validity, or mixed?

Alternative hypotheses; avoiding confounds

Today's agenda

- ~~Methods and Data Talk~~
- ~~Kisilevsky (2003) Discussion~~
- Princeton Baby Lab Tour

For next class:

- Do the reading -- Smith
 - Come to class with questions/comments about this paper
- Submit a multiple-choice mock exam question on Canvas
- Office Hours; Thursdays 12-1pm (In-Person and Zoom)
 - ...or just email me!
- Don't forget to sign up to present your baby photo!
